

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

In the case of Uganda, Mr. Hesketh Bell, his Majesty's Commissioner for the Protectorate, has prepared a scheme for dealing with the scourge in his Protectorate. The main features of the scheme are the deportation of the population from the infected lake shore and the segregation of the sick in a number of large camps, where they can be treated by atoxyl or other drugs which give hope for success.

THE INTERNATIONAL ASSOCIATION OF ACADEMIES

THE International Association of Academies, which met at Vienna at the end of May, will hold its next meeting three years hence in Rome, under the auspices of the Academia dei Lincei. We learn from the *London Times* that among the decisions taken was a resolution to codify the rules of procedure of the association. The issue of a complete and authentic edition of the works of Leibnitz was agreed upon, both the mathematical and the philosophical departments of the association recognizing its desirability. Progress less marked was made in regard to the interchange on loan of manuscripts between libraries, but the question was fully discussed and a small international committee chosen to deal with it pending the next meeting.

Some advance was also made in regard to the publication of the projected standard edition of the Mahabharata, while progress was reported in the preparation of the Encyclopædia of Islam, of which Professor de Goeje, of Leyden, laid before the meeting the first section in three languages—English, French and German. General satisfaction was expressed by the delegates at Mr. John Morley's action in granting, on behalf of the India Office, £200 a year for the next ten years as a contribution towards the cost of the work. The Belgian government has announced its intention of subsidizing the scheme for an international bibliography of historical and philosophical subjects, and it is hoped that support will also be forthcoming from England and America. The proposal that the

association should choose an international auxiliary language, such as Esperanto, for use in the communications between members was negatived by 12 votes to 8. France and England voted with the majority. Austria accepted the principle of an auxiliary language, but would have opposed the choice of Esperanto, on the ground that it is not a scientific medium of communication.

ADDRESS ON THE OCCASION OF THE DEDICATION OF THE LINNÆAN BRIDGE¹

THE recognition of the work of famous men is one of the happiest duties of mankind. It stimulates our endeavors and encourages us to make efforts which we would probably not make without their examples before us.

To-day we do homage to a distinguished man of science, and the unanimity with which the scientific societies and institutions of the City of New York join in this tribute is in itself evidence of the value which is placed upon his contributions to natural history.

Science has made great progress during the two centuries which have elapsed since the birth of Linnæus. Theories have in large part given place to ascertained facts or have been replaced by other theories based on more accurate knowledge of natural objects and of natural phenomena. The contributions of science to the welfare, comfort and happiness of mankind have made present human life widely different from that of two hundred years ago, and this amelioration of our condition, and the more general diffusion of knowledge has been accompanied by a vast improvement in morality.

The ceremonies of to-day are worthy of the great naturalist whose birth they commemorate. Societies and institutions all over the world join with us in honoring him, and are represented here by delegates or have transmitted documents expressing their appreciation of his life and labors. The public natural science institutions of New York have come to take leading parts in the subjects

¹Delivered at the dedication to Linnæus of the Pelham Parkway Bridge over the Bronx River, by Nathaniel Lord Britton, President of the New York Academy of Sciences, May 23, 1907.
